

*Uniting key technologies for
the human centric society of
tomorrow*

ABOUT

Atomind is a technology venture capital company whose focus lays in technology and technological inventions that are shaping and paving the way into the 22nd century.

We are prominent leaders in technology and social development. Our team brings financial technology, paradigm shifting companies, and leading fintech executives together with the aim of incubating and launching companies, as well as high yielding and rapidly growing consumer-driven products in this developing digitalized world.

CHAIRMAN MESSAGE

We had set out to build a small portfolio of promising ventures and in-house projects while simultaneously taking daring steps into the exciting realm of AI, and over the last 2 years we have witnessed the market take a turn which most had not expected to see happen so quickly.

We're at the dawn of digital transformation: IoT, Machine learning, Artificial Intelligence, Biohacking, Transhumanism and Blockchain technology. As innovators we must show that the strategic decisions we took, not only for ourselves but also for our trusted stakeholders and partners, have proven to be the right ones.

Digital transformation is imperative for the success of all business. IT and technology have changed the way organizations and their work environments conduct business.

According to the European Commission, digitalization has had a positive impact on the economy, quality of life, society and we have made it our mission to foster innovation within the digitalized world.

Our Atomind team has extensive experience in setting up and managing investment funds, developing automated investment interfaces and asset management tools while effectively working with regulatory authorities.

These innovations reach us from the entrepreneurs who approach us with business ideas or via our own experienced business scouts who identify new market opportunities. We have a clear philosophy behind our investment decisions. We envision a new society where conventional business aspects, like data transfers and commercial transactions, will continue to transform our future.

Percy, Atomind Chairman

MISSION

The convergence of art with media, digital interaction, and the next generation of digital transaction technology that will dominate the blockchain evolution in most aspects.

The access to information and technology combined with global supply and demand is reshaping established protocols and rapidly corroding old world definitions and Atomind is eagerly taking on these challenges.

Future finance (Blockchain/Decentralized finance)

PROPERTRUST

The Propertrust Platform provides special digital legal certification solutions via the blockchain. It also features a strong identity management and reliable digital signing solutions based that even allows a blockchain to paper interface.

Propertrust automatizes the on boarding process to a digitally signed agreement by qualifying all stakeholders. Propertrust provides risk analysis and compliance eatures that ensure a fully digital contracting and contract execution protocol based on smart contracts, business process automation and a non-fungible-token infrastructure.

Accredited

Digital Asset Custodian

ACCREDITED

Accredited Digital Asset Custodian, ADAC, is a multi-boutique solution to digital asset management that allows the user to purchase and transact with crypto, manage their digital asset portfolio, and verify their identity and investor status - all from a secure mobile application. In the “portfolio section,” the user can access security tokens, such as shares, adaptive share tokens, digital mutual funds, bonds and other digital security assets.

CEDENT

Cedent is redefining institutional finance.

In the near future every asset will be tokenized. Cedent will be an integral part of this revolution by providing a secure platform for companies and institutions to seamlessly transition to this newfinancial ecosystem.The cedent protocol utilizes a set of smart contract templates developed specifically for securitization, enabling quick establishments of trust and deployment, while simultaneously allowing for quicker and more accurate data reporting.

REA ART FAIR

A strategic pivot of the Artsted project consists in introducing NFT (Non-fungible-token) assets along its offerings of physical artworks.

The differentiating factors in the Artsted NFT program are the use of transaction effective and environmentally friendly blockchain (Polkadot) and curating the digital assets to bring the Web3 tools to a 60 billion dollar traditional fine art industry.

Artsted

ARTSTED

Artsted online trading platform: peer to peer approach to early bird art investment & alternative asset finance.

Artsted.com is a project of Artisfact Ltd, an online enterprise that is operating in the context of art Industry 2.0, merging the artist-to-collector marketplace with a digital track record and provenance depository.

Artsted.com is an online platform that is designed to cater to the ever-growing demand for transparent, publicly accessible and reliable art market data, to be used for asset performance analysis and algorithm behind the “The Artist Coefficient” tool.

METAFRAG

METAFRAG

Metafrag aims to be the platform which facilitates the metaverse adjacent to real-world REIGs. The Metafrag ecosystem will allow users to fragment their LAND NFT's (and other metaverse assets) and create a subsequent governance DAO on the Avalanche blockchain. The REIDAOs may also be created prior to the purchase and fragmenting of a LAND token, if an investor group is seeking cooperative ownership opportunities.

DECENTRALAND

Decentraland is a software running on Ethereum that seeks to incentivize a global network of users to operate a shared virtual world. Decentraland users can buy and sell digital real estate, while exploring, interacting and playing games within this virtual world.

EXOSPACE

Exospace is a subsidiary of Atomind, and a 20/80 joint venture with NASDAQ listed Ehang, the global leading manufacturer for personal transportation drones.

Exospace stands for Vertical Take off and Landing Vehicles. Exospace will launch personal transportation drones, cars for 2 to 4 people. It offers stress-free transportation even during rush hours to and from local hubs in Switzerland.

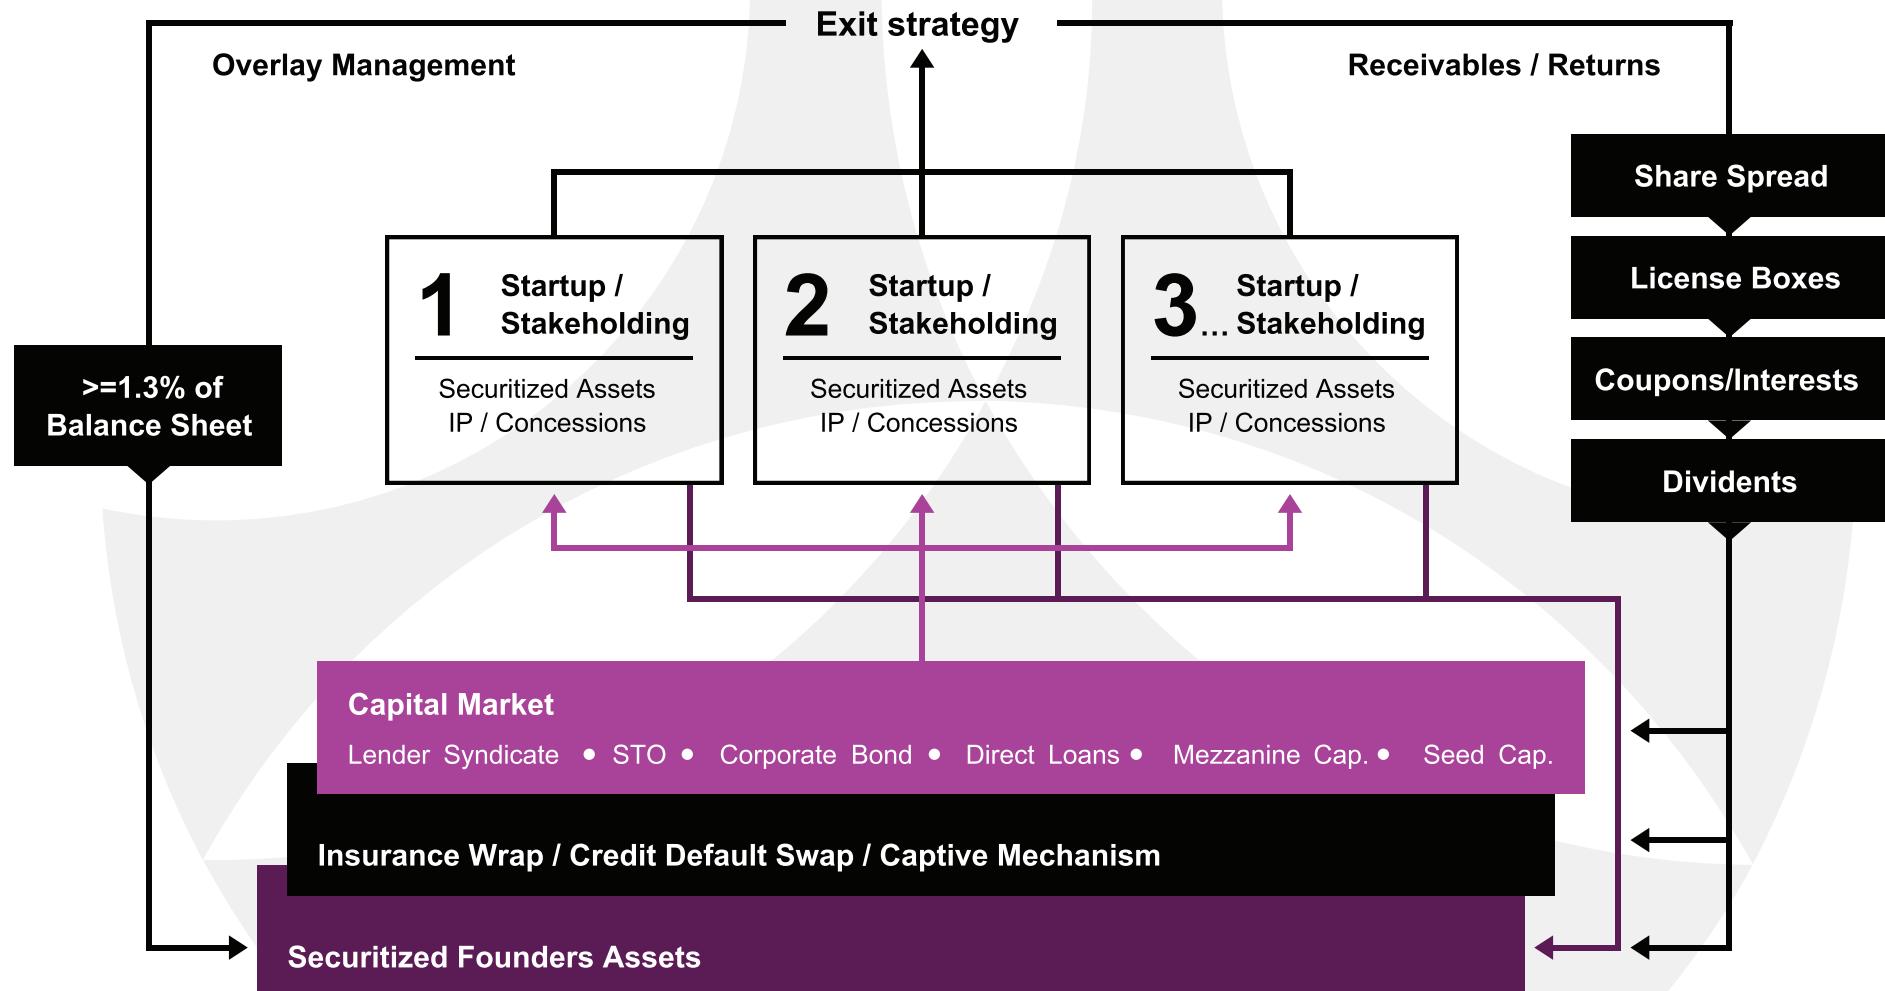

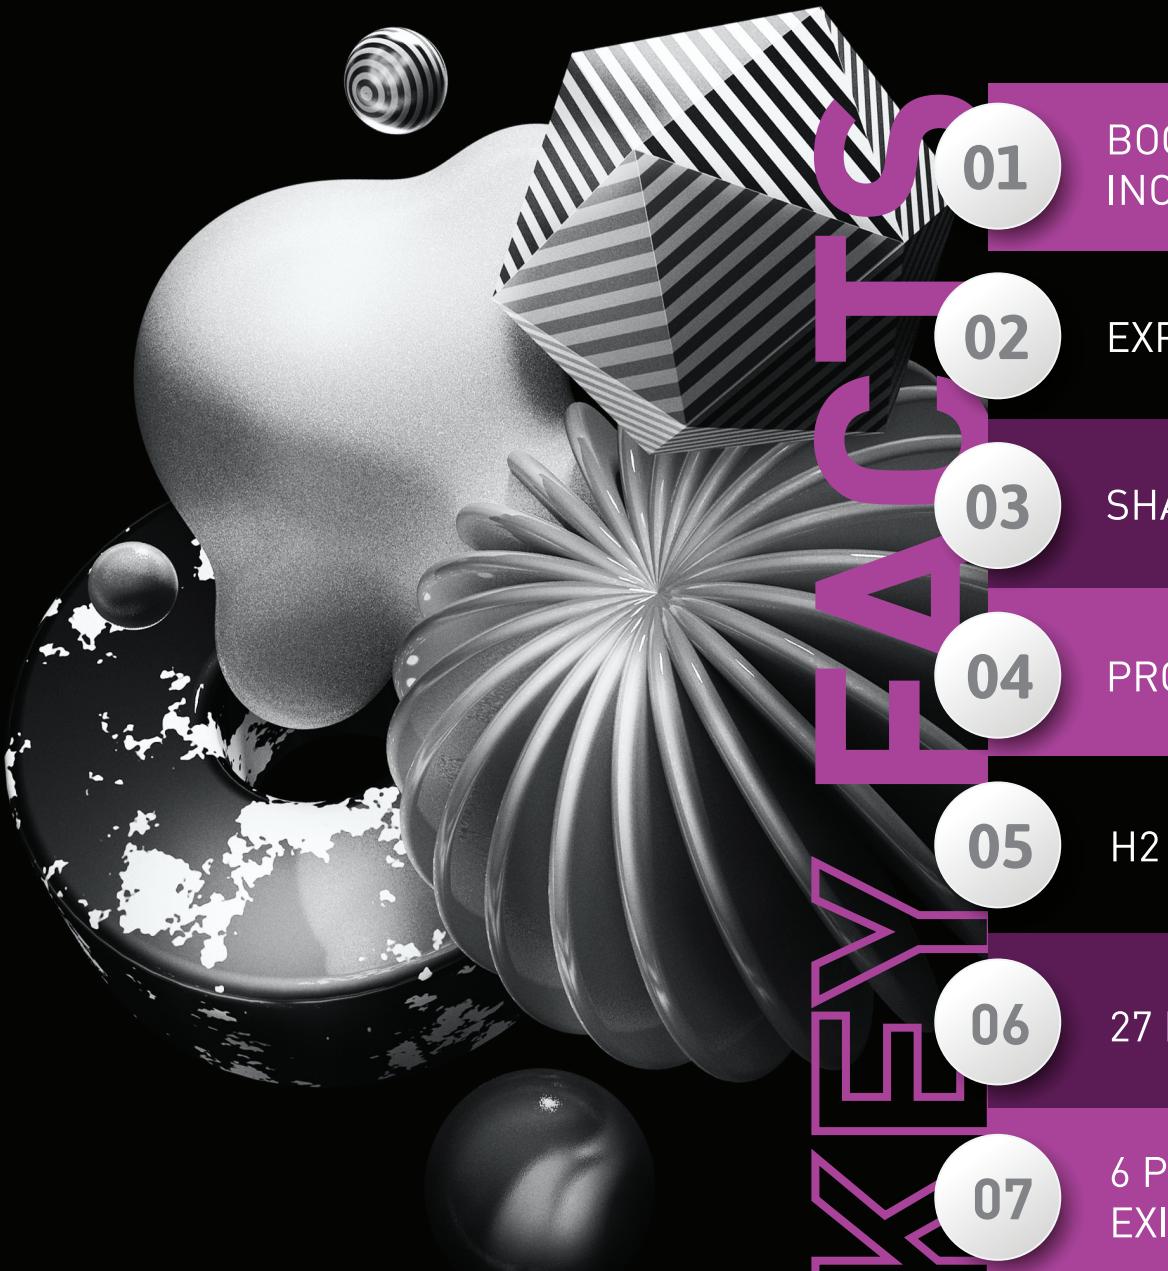

KENNETH

Kenneth is Brainsfield's Near Conscious Artificial Intelligence project. It is a cloud-based mathematical prediction engine used for social, statistical, and financial decision making. It functions off AI augmentation using Analogue Computing Technology.

One of the various use cases for Kenneth are the assessment and scoring of crypto wallets, which interfaces various Atomind platforms such as Cedent and Propertrust. Another focus will be "Application-less Computing", a system that makes apps obsolete by automatically solving problems.
